

Breeding season on the real certificates

74 AOA certificates • 950 animals • 48 dams ×26 sires • built 2026-08-18

1.00%	8.98%	41.6	26.8	15	48
Mean F of registered	Highest F • RR PALOM	Effective size (Ne)	Founder genome equiv.	BLOCK pairings	Year-1 bookings • F

What this number is, and is not

F of a cria is the Malecot coancestry of its parents. Path lists are narration; scoring uses the recurrence.
Missing ancestors can only push F up. A low F on a thin pedigree is a floor, not an outcross.
Color on these certificates is AOA phenotype, not MC1R/ASIP genotype. This does not replace EPDs or lab test
BLOCK is parent x offspring, full sibs, or F >= 20%. CONFIRM is half-sib / grandparent range (F >= 10%).
The registered nucleus behaves like ~42 unrelated animals, not 74.

Year-1 plan (capacity 4, then 5 last-carrier rescue swap(s))
